

Eliminate the risks of being non-compliant and reduce the total cost of ownership by proactively managing your IT assets.

Manage your IT Assets and improve profitability

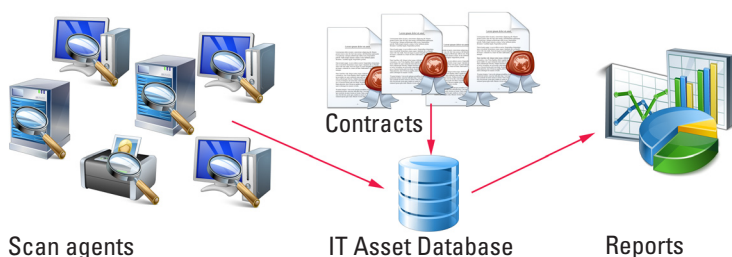

Today IT administrators are asked to document and manage the company's IT assets to reduce cost, improve IT service levels, manage change and ensure compliance with regulations and licensing rules. The process of ensuring that all hardware and software applications are accounted for, properly allocated, efficiently used and within IT policies and legal regulations is further complicated when the assets exist in different locations throughout the world.

100% visibility, 100% updated

Netop Asset Control provides complete visibility of important IT assets in one central location, regardless of where they are. With Netop Asset Control IT administrators can proactively discover, manage and track their company's IT assets, usage and licenses. Constantly updated real-time information and flexible reporting enables companies to produce important data for planning budgets, system upgrades, system roll-outs and software deployment. Netop Asset Control allows companies to improve the productivity of their IT resources, reduce the total cost of ownership (TCO) and increase their return on investment (ROI).

Netop Asset Control at a glance

- Small scan agent which does not impact performance
- Comprehensive hardware and software inventory
- Integrated licence management including expiry alerts and software approval process
- Advanced search function allowing an easy compliance check
- Flexible, highly configurable reports
- Software usage monitor for identifying unused software licences

Benefits

Reduce costs

- Eliminate costly overspending on software
- Leverage your buying power
- Avoid penalty fees by keeping track of leased equipment
- Eliminate maintenance fees on unused assets
- Extend the life time of assets by redeployment

Improve productivity

- Automate detection and change tracking of your IT assets
- Single unified repository with up-to-date data on all of your IT assets
- Create customized reports and analysis with a few mouse-clicks
- Speed up planning cycles
- Improve your IT service levels

Ensure compliance

- Be prepared for any upcoming software audit
- Monitor the compliance status of your network in real-time
- Help enforce software policies
- Receive automatic notifications on software license expiry
- Detect unwanted software, music and movie files

Netop® Asset Control

Features

Central, time-saving inventory scan – Get a quick comprehensive overview by performing a remote scan defined by IP ranges, computer lists or Active Directory based computers without noticeable performance costs and the need of installing an agent on the clients.

Scheduled scanning - Easily deploy the Netop Asset Agent and schedule inventory scans to automatically monitor all changes in hardware and software across the network.

Detailed hardware inventory – Full overview on all relevant hardware components, including details about system BIOS, RAM, hard disk size and free space, graphics card, serial numbers, IP addresses, printers and more.

Automatic software detection and metering – Identify which applications are used across the organisation and evaluate how frequent the software is used to avoid overspending on licences.

Detect unwanted software and files – Find out how much disk space could be freed on your PCs when deleting non work-related music and movie files.

Comprehensive licence management – Manage all software licences, serial numbers and service agreements. Include custom data including cost center, purchase quarter, leasing company, attach licence documents and define maintenance expiry alert email notifications.

Built-in software approval process - Categorize installed software by types, enforce software policies and discover non-approved software on the network.

Flexible search function - With the flexible search functions you can easily and quickly locate a specific computer by name, user, IP address or application.

Customizable analysis and reports – Use advanced built-in filters to create custom analysis and reports, e.g. check PC hardware specifications in preparation for an operating system upgrade or software rollout.

Easy data export and report sharing – Export data into other applications and produce reports for presentations to various file formats including XML, CSV, HTML and PDF. You can even allow authorized persons to create reports on-the-fly and publish them on the intranet.

Full support for virtual computers – Scan and manage even virtual machines created with VMWare or Microsoft Virtual PC and automatically categorize for easier recognition.

Seamless integration with Netop Remote Control - Right-click on a computer to start a remote session including remote control, file transfer or remote management and perform additional administrative tasks on your networked PCs.

Efficient scan agent – Extremely small and efficient agent with leading edge hardware and software discovery with low overhead on the client's machine.

Fast and easy setup – Netop Asset Agent can be deployed to all machines using standard deployment tools including Active Directory via MSI or using network login scripts.

Modules

Asset Agent	Service running on all PCs and servers to be scanned regularly.
Asset Manager	Admin interface to manage and analyse the data collected by the agents.
SQL Server	Central data storage which holds the Netop Asset Control database and data share.

System Requirements

Asset Agent	Windows XP/Vista/2000/2003
Asset Manager	Windows XP/Vista/2000/2003
SQL Database	Microsoft SQL Server 2005 (does not need to be dedicated)

Licensing

License Model	Perpetual licensing per scanned agent Volume licensing available Free technical support and upgrades for 12 months
Supplementary solutions	Netop Remote Control (cross-platform solution for remote maintenance of PCs and servers)
